# WinRx PCLIK Setup
How to import McKesson catalogs from PharmaClik to WinRx

If this is your first time importing the catalog, you should first go to WinRx Utilities and run "Initialize Drug File" and set the Supplier to "PCLIK". Then, in WinRx go to Settings > System and set default wholesale to "PCLIK". Go to Settings > Supplier, edit your McKesson supplier and make sure the ID is set to "PCLIK".

Otherwise proceed to the steps below.

1. Download the McKesson catalog from the PharmaClik website. The download will be in a .zip file so you will need to extract the contents of the zip file to the C:\WinRx folder.

2. Sign in to WinRx as a supervisor and go to "Import Catalog" and check on "Reset Local Drug Prices".

3. Click Browse, select the catalog file (typically it will be named "WEBCAT") and click Update (this part may take several minutes to complete).
